

BEST-OF-BACKTESTING UI

Built like a backtester — not a trading terminal.

Reworked from the patterns that make AlgoTest, Stockmock and QuantMan the cleanest options-backtesting tools in the market — a live payoff & analysis panel, tabbed result charts, and a customizable trade table — rebuilt in STRYK's Midnight Teal identity. Every existing feature stays.

ALGOTEST

- Clean multi-leg builder, no clutter
- **Live payoff diagram** beside the legs
- Analysis: Max P/L · Breakeven · R:R
- Per-leg **Greeks** (Δ Θ Γ V)

STOCKMOCK

- **Chart-tab switcher**: Payoff · MTM · DD
- Basket S1/S2/S3 + combined view
- **Addons** to customize the table
- Day-one detailed day-wise results

QUANTMAN

- Friendly, low-clutter strategy entry
- Strong **optimization** workflow
- Pre-built logic, fast iteration
- Clear objective-driven sweeps

The next three screens show the result: **Build** (payoff + analysis), **Results** (chart tabs + table), **Optimize**. Page 5 maps what came from where.

WHAT CAME FROM WHERE

The best of three, in one identity

Each borrowed pattern is a proven backtesting convention — adopted, then re-skinned to Midnight Teal. None changes STRYK's engine.

ALGOTEST

Live Payoff & Analysis panel beside the legs — Max Profit / Max Loss / Breakevens / Risk-Reward / Prob-of-Profit, plus per-leg Greeks (Δ Θ Γ V). You see the strategy's shape before you ever run it.

STOCKMOCK

Chart-tab switcher + customizable trade table — one chart frame flips between Equity / Payoff / Drawdown / Monthly / Rolling-straddle; an "Addons" menu compresses P&L, sorts by exit, toggles columns.

QUANTMAN

Objective-driven optimizer — pick parameters, a method, an objective; a live master-summary table ranks every combo with progress (36 / 36 tested). Fast, legible iteration.

STRYK

The identity that ties it together — Midnight Teal palette, lightning mark, left rail, MAE/MFE & exit-reason badges (your differentiators) carried into every table. Familiar to any AlgoTest user, unmistakably STRYK.

Want this live? The biggest adds are the **Payoff & Analysis panel** and the **chart-tab results**. Tell me to proceed and I'll wire them into the app — presentation only, engine untouched.
