

TOGGLE STYLES & SETTINGS PLACEMENT

How your switches should look — and where they live.

Two decisions, separated. **Style** = the visual form of each on/off control. **Placement** = where the settings sit in the flow. The next pages show six options for each, then a recommendation. Nothing here changes behavior — only how controls are presented.

THE TOGGLES & SETTINGS IN STRYK TODAY

Most are simple on/off switches in their own bordered rows. The question: which **style** reads best, and should they stay inline or move into an **Advanced** group / drawer / tab?

Six toggle styles

01 Switch + caption RECOMMENDED

Pill slider with a label and one-line helper. Today's control, refined.

Spot adjustment
Exit + re-enter on ±X% move

Buffer strike
Off

scannable familiar helper text

02 Segmented On/Off

Explicit ON / OFF buttons — leaves no doubt about state.

Re-entry rollover

On Off

Filter

On Off

explicit wider

03 Checkbox chip

Compact chips — great when many toggles sit in one strip.

☒ Spot Adj

☒ SuperTrend

☐ Buffer

☐ Filter

space-saving multi-select feel

04 Card toggle

Whole card is the control — title, description, switch. Premium, roomy.

Re-entry rollover
Exit anchors next expiry · same-day rollover

No rollover
One trade per segment

self-explaining tall

05 Icon button

Pressed-state icon buttons in a toolbar — dense, terminal-like.

Roll

Spot

Six placement patterns

01 Inline cards

Each toggle in its own row, always visible. Today's layout.

Config fields

⚙ Re-entry · ■ Spot · ⇄ STR ...

Legs →

Best for: discoverability. long scroll

02 Advanced accordion RECOMMENDED

Core fields visible; advanced toggles fold into a collapsible "Advanced" group.

Index · Expiry · Dates

► Advanced rules & adjustments (6)

► collapsed by default

Best for: clean default + power on demand (progressive disclosure).

03 Settings drawer

A ⚙ button slides in a right panel holding every toggle, grouped.

Builder

⚙ Settings drawer ▶

Best for: keeping the canvas uncluttered; settings one click away.

04 Rules tab

A dedicated "Rules & Adjustments" tab beside Build, for all toggles.

Build · Rules · SuperTrend

All toggles grouped here

Best for: heavy rule sets; separates "what" from "how it behaves".

05 Chip toolbar

All toggles as a single chip-strip above the legs — flip on/off fast.

[Spot ✓] [STR ✓] [Roll] [Buffer] [Filter]

Legs →

Best for: speed & density; pairs with the checkbox-chip style.

06 Popover groups

Gear icon opens a popover with toggles grouped (Rollover · Adjust · Filter).

Builder

⚙ ▼ popover

Best for: minimal chrome; least screen real-estate used.

Switch + caption · grouped in an Advanced accordion

Keep the familiar switch (with helper text), but stop them flooding the config: fold the six advanced toggles into a collapsible "Advanced rules & adjustments" group, expanded only when needed.

Why this pairing

- **Switch + caption** stays familiar and scannable — no relearning.
- **Advanced accordion** cuts the default scroll by ~60%, surfacing only Index/Expiry/Dates first.
- A **"2 on" badge** shows active rules without expanding.
- Tri-state segments stay for non-binary settings (re-entry mode, underlying).

If you want denser instead

Pair **checkbox-chips** (style 03) with a **chip toolbar** (placement 05) — every toggle in one strip above the legs. Best for power users on wide screens.

Effort

Low — wrap existing toggles in a collapsible group. Pure presentation; no behavior change.

Pick a **style number** + a **placement number** (e.g. "01 + 02") and I'll wire it into the live STRYK builder.
