

UX PERMUTATIONS · LAYOUT PLAYBOOK

Same features. Seven ways to **arrange** them.

Every STRYK capability stays. This document treats the interface as a combinatorial system — five UX axes, a handful of coherent layouts — researched against how the world's top quant desks and options platforms structure dense trading tools. Pick a direction; nothing in the engine changes.

How the best desks present complexity

Surveyed elite quant firms, retail options platforms, and 2025–26 fintech dashboard practice.

FIRMS **Quant houses**

Jane Street, Two Sigma, Optiver. Restrained palette + a single strategic accent (Jane Street's red hexagons, Optiver's orange). Card-based modular grids, sans-serif clarity, a geometric signature motif. Intellectual rigor — not cold minimalism.

PLATFORMS **Options tools**

Opstra = dense pro terminal, max tools per screen.
Sensibull = clean drag-and-drop, beginner-first.
TradingView = powerful charts + robust backtesting. Two valid poles: density vs. guidance.

FINTECH **Dashboard UX**

Card grids, top-banner KPIs, side panels for related functions, **progressive disclosure**, sticky left-rail actions. The 2026 shift: arrange the UI around the user's **decision workflow**, not the tool's internal structure.

PRINCIPLES DISTILLED FOR STRYK

01 One accent, used with discipline. Blue carries identity & action; green is reserved for profit & confirm. Everything else is structure.

02 Let density be a choice, not a default. Offer both a guided path and a terminal-dense path — same features underneath.

03 Disclose progressively. Summaries first, depth on demand — advanced toggles, lazy legs, MAE/MFE fold away until needed.

04 Results live beside the decision. The faster config → result feels, the more strategies a user tests.

The complete STRYK feature set

Every permutation that follows must surface all of these. Grouped into seven modules.

① Instrument

■

 NIFTY · SENSEX

■

 MIDCPNIFTY · BANKNIFTY

■

 weekly / monthly groups

② Configuration

■

 Underlying: Cash / Futures

■

 Expiry basis · expires-on

■

 Entry / Exit days-to-expiry

■

 Date range

③ Rules & Adjust

■

 Re-entry rollover

■

 No-rollover

■

 Filter · Spot adjustment

■

 Buffer strike

④ Leg Builder

■

 Futures / Options / Midcap100

■

 Buy/Sell · Call/Put

■

 Strike criteria · gap · type

■

 Lots · per-leg SL / Target

■

 Lazy legs

⑤ SuperTrend Filter

■

 STR enable · presets 5×1/5×2

■

 Entry / exit rules

■

 Custom segment upload

⑥ Results

■

 KPI cards · equity · drawdown

■

 Monthly returns · trade sheet

■

 MAE / MFE · exit reasons

■

 Export XLSX / CSV

⑦ Optimizer

■

 Param sweep tree

■

 Method · workers · objective

■

 Master summary · combined export

✦ Global

■

 Theme toggle (kept)

■

 Save strategy

■

 Run / Optimize actions

THE FIVE UX AXES — WHERE ARRANGEMENT IS FREE

A · NAVIGATION	B · CONFIG SHAPE	C · RESULTS	D · RUN ACTION	E · OPTIMIZER
rail · tabs · %% K · stepper · dock	2-col · accordion · drawer · wizard · dense	inline · split · full · tabbed · modal	footer · rail · FAB · inline	modal · page · drawer · inline

$5 \times 5 \times 5 \times 4 \times 4 = 2,000$ theoretical arrangements. Most are incoherent. The next pages curate the **7 that hold together** — the minimum set worth building.

The seven coherent layouts

Each layout is one pick per axis. All keep the full feature set; they differ only in choreography.

LAYOUT	A · NAV	B · CONFIG	C · RESULTS	D · RUN	E · OPTIMIZER	BEST FOR
① Studio	left rail	two-column	inline	sticky footer	modal	balanced default
② Terminal	top tabs	dense single-screen	split-pane	rail CTA	inline panel	power users
③ Cockpit	left rail	two-column	persistent split	rail CTA	right drawer	rapid iteration
④ Flow	stepper	wizard steps	full-screen	inline (end)	drawer	newcomers
⑤ Canvas	minimal chrome	inspector drawer	split-pane	FAB	drawer	focus / demo
⑥ Command	⌘K palette	accordion	tabbed	rail CTA	dedicated page	keyboard-first
⑦ Briefing	top nav	drawer config	dashboard	FAB	modal	portfolio view

Read each row as a recipe. `Studio` is what's live today. `Cockpit` and `Terminal` are the highest-leverage upgrades for serious backtesting. The schematics follow.

Studio

A · RAIL

Build · Results · Optimize

brandnav

HEADER · INSTRUMENT · THEME · SAVE

B · CONFIG (COL 1)

instrument · expiry · rules · adjust

LEG BUILDER (COL 2)

segments · legs · SuperTrend

+ add leg

D · STICKY FOOTER – RUN BACKTEST · OPTIMIZE

NAV	CONFIG	RESULTS	RUN	OPTIMIZER
Left rail	Two-column	Inline below	Sticky footer	Modal

Best for: a confident, low-risk default. Familiar, scannable, everything one scroll away.

| Shipped today. The baseline the others are measured against.

Terminal

A · TOP TABS — BUILD / RESULTS / OPTIMIZE / DATA

B · DENSE SINGLE-SCREEN CONFIG

instrument + expiry + rules + leg builder + SuperTrend, all visible — Opstra-style, zero hunting

collapse groups

lazy legs

C · SPLIT-PANE RESULTS — KPIS + EQUITY

TRADE SHEET · MAE/MFE · EXPORT

E · inline optimizer panel

NAV	CONFIG	RESULTS	RUN	OPTIMIZER
Top tabs	Dense single-screen	Split-pane (live)	Rail CTA	Inline panel

Best for: power users who run dozens of backtests an hour and want every control + result on one screen.

| Mirrors Opstra's "professional terminal" density — maximum tools per screen, minimum navigation.

Cockpit

Best for: the fastest config → result loop. **My pick** — keeps Studio's familiarity but puts results permanently beside the controls.

"Results beside the decision." The smallest change with the biggest workflow payoff.

Flow

Best for: newcomers and onboarding. Sensibull's beginner clarity — never overwhelming, yet nothing removed.

| Could ship as an optional "Guided mode" toggle alongside Studio — not a replacement.

Canvas

A · MINIMAL CHROME — ONLY LOGO, INSTRUMENT, ⌘K HINT

C · STRATEGY CANVAS — LEGS AS DRAGGABLE CARDS ON A PAYOFF BACKDROP
live equity + payoff diagram as the hero; cards snap into place

D · FAB run

B · INSPECTOR DRAWER
click any leg/zone → full config + rules + SuperTrend slide in; advanced + lazy legs nested

E · optimizer drawer

NAV	CONFIG	RESULTS	RUN	OPTIMIZER
Minimal chrome	Inspector drawer	Canvas split	FAB	Drawer

Best for: screenshots, demos, and a memorable identity. The payoff-diagram-as-hero is the signature moment.

The bold bet — most distinctive, highest build effort. Reads least like every other backtester.

Command · Briefing

A · ⌘K COMMAND PALETTE
"run · optimize · load NIFTY straddle · export..."

B · ACCORDION CONFIG
collapsible sections · C · tabbed results · E · dedicated optimizer page

A · TOP NAV

C · DASHBOARD LANDING
saved strategies + KPI tiles

B · DRAWER CONFIG
"New strategy" → slides in · D · FAB

⑥ **Command** — keyboard-first power. Everything reachable in two keystrokes.

⑦ **Briefing** — portfolio-first. Opens on saved strategies & performance, config on demand.

⑥ COMMAND	⑦ BRIEFING	SHARED
⌘K · accordion · tabbed · page	top nav · drawer · dashboard · modal	full feature set · Midnight Teal · theme toggle

Both layer cleanly on top of Studio's components — adopt incrementally without re-architecting.

The minimum set worth shipping

You don't need all seven. Three coordinates cover every user without touching the engine.

SHIP NEXT

③ Cockpit

Persistent split-pane results beside the existing two-column config. Biggest workflow gain, smallest rebuild — reuses every current component.

OPTIONAL MODE

④ Flow

A "Guided mode" toggle for newcomers. Same fields, walked one step at a time. Lives beside Studio, not instead of it.

POWER TOGGLE

② Terminal

A "Dense view" for pros — everything on one screen. Add later; Cockpit's split already does most of the work.

DECISION IN ONE LINE

Keep **Studio** as the home, add **Cockpit's** live split-pane, and expose **Flow** + **Terminal** as view toggles — one set of features, three densities, zero logic changed.

Tell me which layout (or which axis picks) to prototype, and I'll render a full high-fidelity mockup PDF of just that one — then wire it into the live app.
