

SIGNATURE VISUALIZATIONS · BEYOND THE EQUITY CURVE

Every backtester shows the same three charts. **STRYK won't.**

AlgoTest, Stockmock, QuantMan, Streak, Tradetron — surveyed end to end, they all converge on equity curve + drawdown + trade table. That's the floor, not the ceiling. Uniqueness comes from **signature visualizations** and **data storytelling** no competitor leads with. This deck proposes a component library and three distinctive directions — all in Midnight Teal, all engine-untouched.

PLATFORMS REFERENCED

WHERE THEY ALL LOOK THE SAME — AND THE GAP

The convergence problem

Referenced AlgoTest · Stockmock · QuantMan · Streak · Tradetron · FX Replay · QuantJourney · BuildAlpha · SpotGamma / Quant Data.

What everyone already ships

Equity curve · drawdown chart · KPI tiles · trade-by-trade table · payoff diagram (AlgoTest/Stockmock) · chart tabs. Necessary — but identical across every tool. A user can't tell one screenshot from another.

The unclaimed ground

Probabilistic honesty (Monte Carlo cones), **strategy fingerprinting** (radar), **time-as-canvas** (P&L calendar heatmaps), and **data storytelling** (annotated, narrated results). Proven in quant research, rare in retail backtesters.

THREE CONVICTIONS FOR STRYK

Show the distribution, not the anecdote. One equity curve is a single lucky path. A Monte-Carlo cone earns trust by showing the range.

Give every strategy a face. A radar fingerprint makes two strategies instantly comparable — and memorable.

Narrate the result. "Worst day -2.1% on 12 Mar; recovered in 8 sessions." Storytelling beats a wall of numbers.

Eight visuals that set STRYK apart

01 Strategy Fingerprint

Radar of 6 dims — a unique shape per strategy.

REF · radar/spider (quant viz best-practice)

02 Monte Carlo Cone

1,000 resampled paths → a confidence band.

REF · BuildAlpha · Monte Carlo equity analysis

03 P&L Calendar

Daily P&L as a contribution grid — green/red.

REF · FX Replay · trade distribution over time

04 Outcome Ridgeline

Trade-P&L distribution, stacked by month.

REF · ridgeline / distribution viz

05 Strike Map

Where entries cluster by strike — support/resist.

REF · SpotGamma · Quant Data interval map

06 Narrated Equity

Equity curve with event markers + plain-English.

REF · QuantJourney · data storytelling

07 P&L Flow (Sankey)

Where profit comes from — leg → exit reason.

REF · Sankey capital-flow viz

08 Regime Bands

Equity shaded by market regime / volatility.

REF · annotated time-series / regime overlay

CONCEPT — RECOMMENDED HERO

Fingerprint

Results open on the strategy's radar fingerprint beside the equity curve. Two strategies become instantly comparable by shape.

Best for: making STRYK instantly recognizable. The fingerprint is the screenshot people share. **My pick.**

CONCEPT — TIME AS THE CANVAS

Pulse

A P&L calendar heatmap is the hero — every trading day a cell, intensity = P&L. The strategy's rhythm becomes visible at a glance, with a narrated highlight rail.

Best for: a memorable, human read of performance. Feels alive — "data storytelling," not a spreadsheet.

| The calendar + narration is the differentiator FX Replay and QuantJourney hint at; no Indian retail tool leads with it.

Cone

Leads with a Monte-Carlo fan: 1,000 resampled trade-orderings drawn as a translucent cone behind the real curve. Positions STRYK as the backtester that shows the range, not one lucky path.

Best for: serious traders who distrust single-curve backtests. A credibility moat competitors don't have.

HOW TO BE UNIQUE WITHOUT OVER-BUILDING

Pick one hero, borrow the rest

Don't ship all eight. Lead with one signature, keep the proven charts beneath it, and the result reads as nothing else on the market.

HERO · SHIP FIRST

◆ Fingerprint

Highest identity payoff for the effort. The radar is the share-worthy screenshot; benchmark overlay makes it sticky.

SECOND

◇ Cone

Adds a credibility moat. Slot the Monte-Carlo band behind the existing equity curve — same data, more trust.

DELIGHT

▣ Pulse

The P&L calendar + narration as a "Story" tab. Cheap to add, instantly human, very screenshot-friendly.

THE ONE-LINE DIRECTION

Keep the backtesting-first screens, then lead the Results view with the **Fingerprint radar**, wrap the equity curve in a **Monte-Carlo cone**, and add a **Pulse "Story" tab** — three signatures no other Indian backtester has, all presentation-only.

Tell me which hero to build first and I'll render it full-fidelity, then wire it into the live STRYK Results view — engine untouched.
